

User Guide

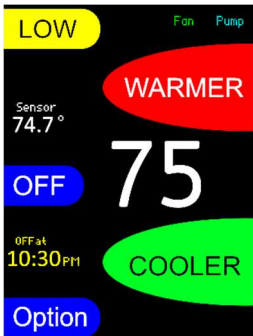

Congratulations!

Thank you for choosing to upgrade your swamp cooler with Roadrunner Comfort. It's super easy to use, but check out this guide, you'll be glad you did.

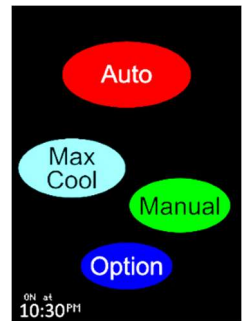

Features:

- *Color touchscreen control*
- *Regulates temperature of incoming air*
- *Scheduled turn-on and -off times*
- *Multi-year sensor battery life*
- *Manual control option*
- *Automatic updates*

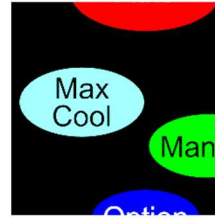

When the cooler is **OFF**, it looks like this:

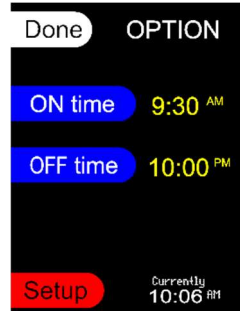

When **AUTO** is selected, it looks like this.

This is your **normal operating mode**. Use 'Warmer' and 'Cooler' to change the Set Temperature ("75").

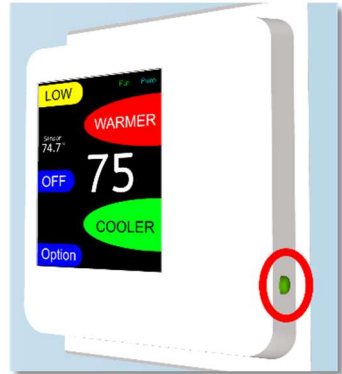

Max Cool (found on the **OFF** screen) runs your cooler on maximum cooling, fan and pump running full time. You can set an OFF time for this mode.

To set **automatic turn-ON** and **-OFF** times, select **OPTION** to bring up this Option screen.

To **RESTART** the controller at any time, press the small green side button until you see the display briefly go blank. Restart **SAVES** your settings. **Try this first** if things don't seem to be working correctly or if you lose your place.
