

Manual Mode

Manual mode allows you to directly control the pump, fan on/off, and fan speed.

Restart

Try this first if things don't seem to be working correctly or if you lose your place.

Press the small green side button until you see the display briefly go blank.

Restart **saves** all your settings.

Satisfaction Guaranteed Warranty & Returns

All returns within 60 days in good, resalable condition, will be refunded in full. The Roadrunner Comfort controller and sensor are warranted to be free from defects for two full years. For any failure not due to external electrical disturbance, invasion by fluid, temperature extremes, or other external cause, Nangeroni Design will repair or provide a replacement at our discretion. Nangeroni Design is not responsible for any damages beyond the unit itself due to any cause, including incorrect installation, improper usage, or defects in the evaporative cooler being controlled.

Made in Los Ranchos, NM by Nangeroni Design

POWER UP

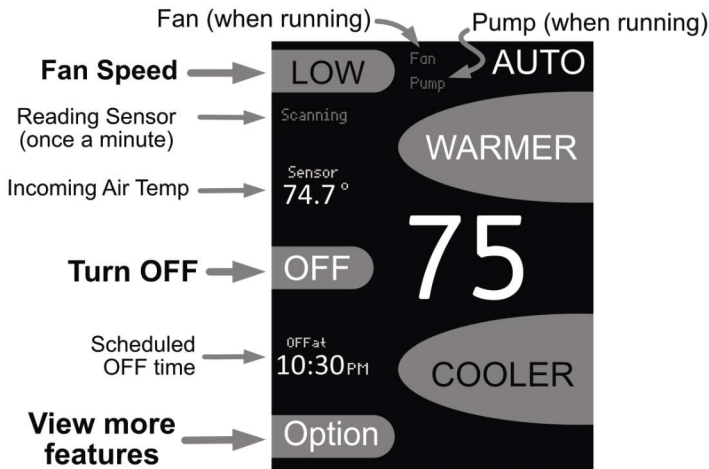

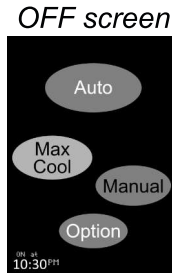

At power-up you must either enter your WiFi credentials or set the clock. Setting the clock works the same as setting Automatic turn-on and -off times (page 4).

Off mode

The next screen that appears is the OFF screen. For normal operation, select **Auto**. To set automatic turn-on and turn-off times, select **Option**

Auto mode

In Auto mode, the fan will run continuously on warm days, while the controller turns the pump on and off. Mornings and evenings, or when outdoor temperature changes quickly, the fan may also turn on or off for minutes at a time.

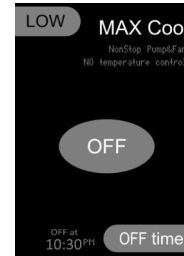

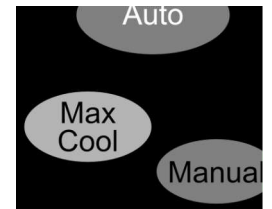

Celsius vs. Fahrenheit

To show degrees in Celsius, select **Option > Setup** and then **UNITS**.

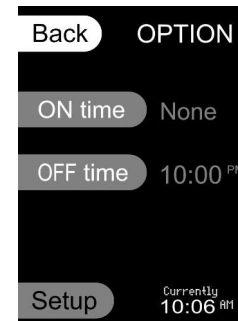

Max Cool Mode

Found on the **OFF** screen, Max Cool runs your cooler on maximum cooling, with the fan and pump running full time. It's intended for when you come home (or wake up) to a hot house.

From the **MAX Cool** screen you can set an OFF time or let it run continuously until **OFF** is selected.

Automatic Turn-ON and -OFF

Select **OPTION** to bring up this screen. Select **ON time** or **OFF time** to bring up one of the following screens:

Swipe up and/or down to change times.

Selecting **Clear** returns you to the Option screen with **no ON (or OFF) time set**.
